NEWS FROM RANCHO SANTA FE TECHNOLOGY

RANCHO SANTA FE TECHNOLOGY COMPLETES UPGRADE FOR COPLEY INFORMATION SYSTEMS

Rancho Santa Fe Technology has completed a major remodel of the data center serving Copley Information Systems in La Jolla, California. An unusual aspect of this project was increasing cooling and power distribution while decreasing the overall footprint of the center. New fire suppression systems were also introduced to the space.

According to project architect Michael Gilkerson, of Rancho Santa Fe Technology, *“Copley was eliminating older equipment that was taking up space. We were able to downsize the total square footage while dramatically increasing the overall capability of the data center.”*

Copley Information Systems provides support to the Copley Press operations in California and newspapers in several Midwestern states.

About Rancho Santa Fe Technology, Inc.

A leading communications contractor in the western states, Rancho Santa Fe Technology is headquartered in San Diego. The firm specializes in installation, maintenance, repair, and upgrade to computer networks and their equipment. It is focused on providing customers with an essential suite of services in interrelated areas; providing service level maintenance and repair contracts for distributed network products for both wide area and local area networks (WANs and LANs) and building connectivity through the implementation of voice/data structured cabling and the roll-out of new enterprise wide data equipment technology. The company was named one of the “25 Top Emerging Technology Companies” in San Diego and received the “Anderson Award for exceeding customer expectations”. The telephone number is 858-565-7224.
